

Slowdown in Activity for the Summer Season

Rouyn-Noranda, June 27 2018 – The Public Health Department of the Centre intégré de santé et de services sociaux (CISSS) of Abitibi-Témiscamingue is informing the public that exceptional measures are being taken in order to insure that essential services are available throughout the summer season. Further notice will be given to the public when services return to normal this September.

Exceptional Measures

“The CISSS is faced with a labour shortage in addition to the vacation leave entitled to all employees during the summer season. These two combined elements forces us to deploy exceptional internal measures, such as independent labour, postponements of vacation time, and reallocation of staff to vital areas in order to assure the continued and well-ordered functioning of essential services”, explains Caroline Roy, présidente-directrice générale adjointe.

Constantly on the Look-Out

“We have developed a number of scenarios in regard to how our services function during the summer season. We are constantly on the look-out to make quick readjustments when the need arises”, adds the présidente-directrice générale adjointe.

Primary Services Points

In order to ensure a labour presence in all essential services in our region, the organisation of nursing services at CLSC service points, including blood sampling, will be **offering a variable service plan** based upon the availability of services throughout the summer season. However, the services offered by the following CLSC service points will be provided as per usual.

In the absence of a nurse, please note that a poster will be placed on the door of each CLSC service point to indicate to patients where they may go to receive service.
